Title: S. Korea: Kia and Hyundai Motors Standardize on EndoInjector

Atmosphere Engineering is proud to announce that Kia and Hyundai Motors have both specified the EndoInjector™ fuel-injection generator control system as recommended standard equipment on all gas generators in their heat treating departments. Further, they have recommended the EndoInjector mixing system be utilized by their heat treating service suppliers as well.

Atmosphere Engineering has many installations throughout South Korea and has worked with equipment manufacturers within the country to help adopt and customize their equipment for the local market. Further, AEC has invested and trained a dedicated support team (DICS, Inc.) located just outside Seoul, Korea to provide on-site service, support, and parts throughout the country. “We view S. Korea as a major part of our South East Asia business investment plan. We have been working together in the region for more than 5 years and are very happy to have the recognition of the major automotive manufacturers in the country.” says Jason Jossart – President of Atmosphere Engineering.
