Title: AEC Partners with Aichelin to Build Endo Generators for Mercedes Benz

Aichelin, the largest furnace manufacturer in the world, has signed an agreement with Atmosphere Engineering to build endothermic gas generators using their fuel-injection technology. The first batch of these generators has been purchased by Mercedes Benz for their facility in Brazil along with a generator supervisory software package from Atmosphere Engineering. The generators will be manufactured at the Aichelin facility in Brazil and are scheduled for installation at the end of 2010. "We are very proud to be working with another industry leader such as Aichelin and look forward to further developing solutions with them into the future" says Eric Jossart, VP Sales Atmosphere Engineering.

Atmosphere Engineering is an engineering and manufacturing firm that designs process flow measurement and control systems for industrial clients and applications. They are a recognized leader in generator control systems and hold patents on fuel-injection technology designed for endothermic gas generators.
